Providing an ultra-clean, dust free environment.

The high efficiency filtration system features HEPA H14 (or ULPA U16) filters that provide optimum protection against external particulate contamination and are designed to provide an ISO 14644-1:2015, Class 5* work environment.

Particulate free workstation

- Protection against external contamination
- Internal air quality achieved by high efficiency particulate filter(s) (HEPA H14 / ULPA U16)
- Carbon filter (optional) to protect handlings from VOCs present in the laboratory atmosphere
- ISO class 5* air quality in the enclosure according ISO 14644-1

Easy to clean

- Work surface is easy to clean
- Seamless worktop with smooth corners (available in TRESPA® TopLab PLUS or Stainless steel 304L)
- Low porosity material

Ergonomic design

- Slanted sash provides an ergonomic position for comfort and productivity
- High luminosity, internal LED lighting (daylight, light intensity > 800 lux)
- 4 models available for your handlings

*With low dust level in the room
Captair Flow 391 Smart
Mobile ductless filtering clean air enclosure

Work surfaces with built in spill tray

Benchcap: fixed work bench

Please add 150mm between the last filter and the ceiling to allow good air recirculation and to replace filters easily

* For Mobicap: rolling cart, deduct 27 mm
Captair Smart
Hotte à filtration sans raccordement
Captair Flow 391 Smart
Mobile ductless filtering clean air enclosure

Designed with you in mind:
Our filtration column can be configured for your specific application requirements.

### Filter configurations

#### Filtration

- **Particulate filter (1P)**
  - HEPA H14 : This filtration technology traps particles larger than 0.1 μm with 99.995% efficiency according to the MPPS method set forth in the EN 1822-1 standard
  - ULPA U16 : This filtration technology traps particles larger than 0.1 μm with 99.9999% efficiency according to the MPPS method set forth in the EN 1822-1 standard

- **Molecular filter (optional) (1C)**
  - Adding a carbon filter to your enclosure allows protection of your samples from VOCs.
  - AS filter: For organic vapors

- **Particulate pre-filter**
  - Protect particulate filters from dust contained in the laboratory environment (only for 1P version)

Erlab’s state of the art Research & Development Laboratory relies exclusively on filtration

About Erlab

We provide safety, we protect your health
Erlab invented the ductless fume hood in 1968. With more than 50 years of experience in the field of chemical filtration and protection of laboratory personnel; we know the formula for safety. With Erlab, you will never have to wonder or worry if our products are safe. We build each one of the following 7 very important safety features into our products. Without all of them, your health and safety will be compromised.

1. Erlab R&D Laboratory
   The engineers and chemists in our state-of-the-art R&D laboratory understand molecular filtration. We are committed to designing products that are safe and of the highest quality, strive to improve our products, and continuously develop new products that provide greater protection in the laboratory.

2. Strict Safety Standards
   We hold ourselves to the highest standard and adhere to the strict AFNOR NF X 15-211:2009 filtration safety standard as endorsed by ANSI Z9.5-2012.

3. A Published Chemical Listing
   It all begins here. Without this listing, we are not compliant with AFNOR NF X 15-211. Our in-house laboratory tests, as well as independent testing, to verify the retention capacity of over 700 chemicals for our filters.

4. Independent Testing
   Erlab filters have been independently tested multiple times at various concentrations guaranteeing that our safety solutions all adhere to the strict performance criteria of the AFNOR NF X 15-211:2009 standard assuring that the emission concentration at the filter exhaust will always be lower than 1% of the TLV.

5. Application Questionnaire (Valiquest)
   Our laboratory specialists will recommend the appropriate filtration fume hood, type of filter, and personalized advice.

6. Certificate of Validation for the chemicals used in the hood
   A certified PhD chemist issues a Certificate of Validation with a list of the chemicals approved for use in the hood.

7. Our Safety Program
   We back up our products 100%. This program includes your specialized chemical evaluation, validation of your hood upon installation, and a filtration safety specialist at your service to ensure that your hood is operating to its full potential during its entire lifetime of use.
